Professional Summary

Full Stack Java Developer with 6+ years of experience building scalable backend systems and **microservices** across banking, healthcare, and e-commerce domains. Strong in **Java, Spring Boot, and REST APIs**, with hands-on experience in event-driven architectures using **Kafka, RabbitMQ**, and designing secure systems using **OAuth2/JWT** and enterprise **IAM**. Worked on distributed systems, database optimization, and cloud-based deployments (**AWS/Azure**), with experience in containerization and CI/CD pipelines. Also contributed to **Angular and React-based UI components** for internal dashboards and operational tools. Experienced in applying AI-assisted software engineering practices using Claude Code, GitHub Copilot, and OpenAI Codex for code analysis, refactoring, documentation generation, testing, and development acceleration, complemented by strong analytical problem-solving skills and a solid foundation in DSA. Known for strong problem-solving, analytical thinking, and a collaborative approach, including mentoring junior developers and contributing to engineering best practices across Agile teams.

Work Experience

Java Full Stack Developer

Client: Northern Trust, Chicago, Illinois

September 2024 – Present

- Built and enhanced **Java 17+ Spring Boot microservices** supporting transaction processing, document workflows, and regulated banking integrations, focusing on scalability, reliability, and secure service communication in distributed systems.
- Implemented IAM, API security, and secure development practices at the API layer using Spring Security, OAuth2, JWT, and Azure AD, enabling RBAC, SSO, secure REST API communication, token validation, and enterprise cybersecurity compliance aligned with NIST, ISO 27002, and DevSecOps initiatives.
- Developed **Node.js (Express)** integration layer for API aggregation and response transformation, optimizing data flow between microservices and frontend applications.
- Developed **React (TypeScript) and Next.js**-based dashboard components using hooks and modular architecture, integrating with REST APIs to enable efficient data retrieval, server-side rendering, and real-time visibility into transaction status, approvals, and exception handling.
- Built event-driven architecture using **Apache Kafka**, publishing and consuming transactional events with **Avro serialization** and AWS SQS/SNS, enabling scalable and decoupled inter-service communication.
- Developed **AWS Lambda**-based serverless workflows for asynchronous processing of transaction events, audit triggers, downstream integrations, and scheduled reconciliation jobs using event-driven patterns.
- Worked with **DynamoDB** and **Cassandra** (DataStax) for semi-structured data and integrated **Elasticsearch /OpenSearch** for indexing and searching, optimizing partitioning and search queries for low-latency access.
- Optimized data access using **JPA/Hibernate** with **Amazon RDS (PostgreSQL)**, **Oracle**, and **DB2**, improving query performance and consistency.
- Deployed containerized microservices on **AWS ECS** (Fargate) and **EKS** using **Docker, Terraform, CloudFormation** and **GitOps**-based deployment workflows for scalable, resilient environments.
- Integrated AWS services including **S3** for storage, **CloudWatch** for monitoring, and **ElastiCache (Redis)** for caching and performance optimization.
- Built and maintained **CI/CD pipelines** using **Jenkins, GitLab CI, AWS CodePipeline/CodeBuild**, implementing automated testing, quality gates, and controlled deployment strategies.
- Developed and executed unit and integration tests using **JUnit, Mockito, TestContainers, and TestNG**, validated backend APIs using **Postman**, and contributed to frontend testing of React components using **Jest and Playwright**, ensuring end-to-end reliability across application layers.
- Implemented **centralized logging and observability** using **Log4j2, SLF4J, Prometheus, and Grafana**, and applied **Resilience4j** for circuit breaking and fault tolerance in microservices.
- Collaborated with cross-functional teams to gather requirements, manage work through **JIRA**, and deliver scalable solutions.

Software Engineer

Client: Johnson & Johnson, New Brunswick, NJ

July 2021 – July 2023

- Developed **Java**-based Spring Boot microservices for prescription, inventory, and reconciliation workflows in HIPAA-compliant systems, focusing on secure and scalable backend processing.
- Designed secure **REST APIs** using **OAuth2.0**, **JWT** and audit logging ensuring PHI traceability and regulatory compliance. Integrated backend services with external pharmacy and healthcare provider systems, ensuring secure and compliant exchange of prescription and patient workflow data.
- Built event-driven workflows using **RabbitMQ** and supported data pipelines with **DynamoDB** and **Redshift** for compliance reporting and analytics.
- Integrated healthcare systems using **FHIR/HL7**, enabling interoperability with EHR platforms.
- Contributed to React dashboards for audit and reporting, supporting business users with data visibility.
- Supported deployments on **AWS (Docker, ECS/OpenShift)** and CI/CD pipelines, along with monitoring using CloudWatch, Datadog, and New Relic.

Associate Software Developer

Client: Revolve, Cerritos, California

January 2019 – July 2021

- Developed **Spring Boot microservices** for product catalog, order management, and checkout workflows and customer location-based service features in a high-traffic e-commerce platform.
- Built secure **REST APIs** supporting customer sessions across web and mobile platforms. Integrated Google Maps APIs for address geocoding, store/location lookup, and delivery zone validation to improve checkout accuracy.
- Contributed to cross-platform mobile application features using Xamarin Forms for iOS and Android.
- Supported **Node.js middleware** for API aggregation and GraphQL integration to improve frontend performance. Optimized performance using **Redis caching (ElastiCache)** and scalable data storage with **MongoDB and Cassandra(DataStax)**.
- Deployed services on **AWS ECS (Fargate)** with CI/CD pipelines (Jenkins, Terraform) and monitored systems using CloudWatch and Datadog.

Education

Master of Science, Computer Science

Aug 2023 – May 2025

Texas Tech University, Lubbock, TX

Relevant Coursework: Machine Learning, Natural Language Processing (NLP), Gen AI, Neural Networks, Deep Learning, Advanced Database Systems

Skills

- **Languages:** Java, Python, JavaScript, TypeScript
- **Frameworks:** Spring Boot, Spring MVC, Spring Security, Spring Cloud, JPA, Hibernate
- **Microservices:** RESTful APIs, GraphQL, Microservices Architecture, API Development.
- **Frontend:** React.js, Angular, Vue.js, RxJS, Redux, HTML5, CSS3, JSON, Redux
- **Databases:** PostgreSQL, Oracle(SQL,PL/SQL), IBM DB2, MySQL, DynamoDB, Cassandra, MongoDB
- **Cloud Platforms:** AWS (EC2, Fargate, IAM, S3, RDS, Lambda, ElastiCache, Redshift, CloudWatch), Azure (AKS, Azure Active Directory, Key Vault)
- **CI/CD:** Jenkins, GitHub Actions, GitLab CI/CD, Docker, Kubernetes, Terraform, Maven, Gradle, IaC
- **Other Tools:** Apache Kafka, RabbitMQ, Git, JIRA, Postman, Swagger, Splunk, Grafana, Kibana
- **Concepts:** OOPs, Design Patterns, Collections, Data Structures, Algorithms, System & API Design Principles, Security & Identity Management (IAM), Performance Optimization & Reliability.
- **Testing:** JUnit, Mockito, TestContainers, RestAssured, Jasmine, Karma, Cypress, SonarQube, Splunk, Datadog, New Relic
- **Methodologies:** Agile, Scrum, Kanban, TDD, SDLC, Pair Programming, SOLID Principles
